	TFNC Cor	nservati	on Matters, Fauna and Flora Observations 1937-1999
Year	Date	Bulletin no or Observn book	Item
QUAR	TERLY NEWS		
1937	Oct	2	Article on Astronomy by Chas Elliott
1937	Oct	2	Article on Tasmanian Conifers:
			Three recorded species. Arthrotaxis cupressoides (King William Pine); Arthrotaxis selaginoides (Pencil Pine) and a variable form of Arthrotaxis laxifolia intermediate between the other two. Lists four other conifersMore detail given. Fitzroya archeri Microcachrys tetragona Pherosphaera hookeriana (Hooker's Pine) Dacrydium franklinni (Huon Pine)
1937	Oct	2	The Secretary of the Tasmanian Biological Survey would like to hear from anyone willing to collect native mice, other small mammals, insects etc. Equipment supplied free and postage paid on specimens sent to him c/o The Museum.
1937	Apr	4	Report of the first six months of this Survey group has been publishedMore collectors are needed Specimens of Cave Spiders and Cave Insects are of particular interest to this Survey group their eyes are more or less degenerateto compensate they possess enormous antennae or feelers and other sense organs are greatly developed More detail given.
1938	Jan	3	H Eliot Howard has written an interesting book on 'Territory in Bird Life' from observations made in England on English birds
1938	Apr	4	Article on Kallista: by Dr AN Lewis. Kallista is the name of the terminus of the Derwent River railway and venue of the 1938 TFNC Easter camp. Article on the geography, geology, rivers, vegetation of the area including Junee and the Adamsfield Track.
1938	Apr	4	Can a complete Trilobite be found at the 1938 Kallista Easter camp? Drawing, description and history of Trilobites included. 'No complete Trilobite has been found in Tasmania, but it is hoped the Kallista beds will yield one' More detail given.
1938	Oct	6	A correspondent asked for the meaning of the word 'Gene' – definition provided
1938	Oct	6	The Biological Survey Secretary reports that the Wanderer Butterfly (<i>Danaida plexippus</i>) was recorded in Launceston at Easter 1938. The first sighting in Tasmania. Its food plants are believed to be <i>Asclepias curassavica</i> – Silk or Milk Weed or sometimes The Swan Plant. Both of which are considered dangerous weeds and should be destroyed if found growing in the wild.
1938	Oct	6	Article on Rat-Kangaroos or Bettongs which are fairly common in Tasmania.
1939	Jan	7	Drawings of three egg cases that are often washed up on beaches. Dog-fish; Skate; Shark.
1939	Jan	7	Field Work for the Tasmanian Biological Survey: "one valuable form of investigation that Field Naturalists could undertake is a survey of a definite area – an Ecological Survey. If you own an acre or two of land you would make a complete record of every species of plant living in the area throughout the year, then do the same with insectsetc." Some very interesting economic facts have been discovered through this study of life of communities. More detail given.
1939	April	8	Tasmanian Biological Survey: TFNCs 1923 Easter camp report contained an interesting article from the late Mr Clive Lord on Native Fauna Preservation and he said 'unfortunately we have not a Biological Survey in Tasmania, much as it is needed.' This Biological Survey is now an accomplished fact. Dr J Pearson formed

			a Committee of scientists in 1937 and this committee with the assistance of
			volunteer helpers has already done much valuable work. More detail given
1939	April	8	An albino blue wren was recently handed into the Biological Survey.
1939	April	8	Junior Geology Classes and Excursions to be held at the Museum conducted by Dr
to	l r		AN Lewis. 9 sessions/pa.
1941			More detail given.
			In April 1939: 'It is regretted that arrangements can only be made to take boys.
			Applications to join from not less than six girls will be considered if this party is
			accompanied by a teacher on field excursions.'
			By July 1939: 'There is a probability of girls being allowed to join.' 'They are being
			well attended'
1939	July	9	An undesirable emigrant: Cabbage White Butterfly (Pieris rapae). The Journal of
			Ag, Vic records that two specimens of this butterfly captured in the grounds of the
			University of Melbourne and at Canterbury. This is the first time it has been
			officially recorded in Australia although it has been a pest in NZ for some years.
			Drawings and a description are provided'
			The most satisfactory method of control is the application of arsenical sprays or
			dustings. Should anyone in Tasmania find this insect it should be reported at
			onceWe have no white butterflies in Tasmania so that anyone of this colour
			seen flying about it almost certain to be Cabbage White.
1940	July	13	Its arrived! A collector for the Biological Survey reported some thousandson
13.0	34.7		New Year's Day at Rocky Head. Flying in from the sea like a cloud heading for
			Stanley
			Caterpillar descriptions givenimmediately report any found. More detail given.
1939	July	9	Interesting Shells – The Fan mussel shell (<i>Pinna tasmanica</i>); The Fan Shell
	,		(Chlamys asperrimus) and The Choice Seaweed Shell (Cantharides eximius).
			Drawings and description and habitat provided.
1939	July	9	Reports of a Pied blackbird have been reported by Mr W Cunningham in his
			garden
1939	July	9	'A Guide to Collecting' is obtainable from the Hon Secretary price 3d. Badges are
			also available. (a copy of this is in Archives of Tas and a copy is in the Library
			Cupboard archives box)
1939	Oct	10	Tasmanian Bats by DCP [DC Pearce]. It may come as a surprise that we have eight
			different species of bats in Tasmania. Much more detail given. Good article with
1000		10	drawings and descriptions of all eight bats.
1939	Oct	10	Letter from a member: About Ants" I had disturbed a nest of large black ants
			but took little notice until I saw a number of 'yellow nippers' swarming over my boots which were emerging from the black ants' nest, but closer investigation
			saw they were coming from a hole <u>beneath</u> the black ants' nest. Has anyone
			seen this before? Had the 'yellow nipper's taken their cousins under their
			protection?
1940	Apr	12	Protection of Marsupials: Our branch in Devonport recently wrote to the fauna
	l r		Board commending it for establishing a Sanctuary at The Cut on the Tamar
			River. At the meeting on the Fauna Board on April 2 nd Dr Pearson advocated the
			full protection of all Tasmanian marsupials, open seasons to be proclaimed
			when and where deemed justifiedmotion was not carried.
			Current regulations have anomalies the Native Cat is protected although it is
			more numerous than the Tiger Cat which is not. The Board is to review this
			again when it is hoped that the Tasmanian Devil, Tiger cat, Potorou (sic).
			Bettong and perhaps the two Bandicoots to the wholly protected listThe
			Thylacine was placed on the wholly protected list too lateit appears to be
			almost extinct and may never increase in numbers again.
			Fauna Board is doing great workso many points of view need to be taken into
			accountbut our marsupialsshould all be protected from indiscriminate
			slaughter of those who with trap and gun kill anything and everything.

Bushfires are another source of danger	
--	--

1940	April	12	Betsy Island by DC Pearse: Article describing history and a recent trip there with The Governor, Museum staff and Royal Soc members. Reports of steel blue rabbits and ground riddled with rabbit and mutton bird burrows. No freshwater on the island. General opinion is that it would not be of much use except as a sanctuary for birds. Although at one time sheep had been pastured, but how they survived is a mystery.
			Note: In 1828 30,000 silver-hair rabbits belong to Mr King were on Betsy island. By 1840 Lady Franklin had purchased the island. Lot more detail given.
1940	July	13	Miss J Sommerville: writes on 'Distinguishing Features of Tasmanian Wattles.' 22
	,		species of wattle in Tasmaniaone or other is in flower for eleven months of the year. A key and descriptions of these wattles is given.
1940	July	13	A new Orchid: Mrs L Rodway reports on what is thought to be the discovery of a new Pterostylis orchid with long hornsand that it has been sent away for identification
CIRCUI	1	T	
1956	7 May	3	Part 1 The Students Flora of Tasmania by Winifred M Curtis advertised
1956	14 Sept	7	A good thing: whilst we do not advocate bush kleptomania, we suggest the collection and preservation of specimens for a particular purpose is a Good Thing for field naturalists. Quoting from the pamphlet "A guide to Collecting and Preserving Plants, Shells, Seaweeds, Insects etc." issued by the club some years ago 'To possess a collection of natural objects, most of which have been found by the owner is a lasting pleasure, reminding one as it does of happy excursions to the bush or sea shore.
			If, indeed to the gathering together of interesting specimens care is taken to label them correctly, the collection at once becomes of scientific value. In the past, amateur collectors were content to collect just for the sake of owning the objects, but today they go further studying, classifying and recording life histories. We wish to urge collectors to carry out this useful work as thoroughly as time will permit. Tasmania offers exceptional opportunities, so little research has been done and many new forms await discovery". This interesting and instructive booklet is (was) available from the Librarian at meetings We might add that a modern method of collecting and preservation is the
			absorbing and inoffensive one of colour photography.
1956	14 Sept	7	A bad thing: Collections obviously do not extend to birds' eggs. There is
			absolutely no justification for taking these and it is here that the colour film is
			particularly useful since the record can be kept without the next being disturbed.
1057	45.84	11	A habitat shot can also be included, increasing the value of the record.
1957	15 March	11	Mr J Picone has reported that whilst spending a couple of nights at "Thark" on Mt Wellington a mother and half-grown brush opossum came into the hut through the window on the first night. The youngster was an albino and the light of the torch caused him (or her) considerable distress" Mr Picone photographed the albino and we hope to see the result in due course.
1957	15 March	11	Ethnological Note: How to create fire: using cotton waste, acetone and sparks from an electric soldering iron
1957	14 June	14	White ibis recorded in Tasmania for the first time – sightings from NW, Oatlands and Blackmans Bay. Mr Sharland accounts for this record and for the spoonbill record by the fact that the feeding grounds on the mainland have dried up to some extent. It is hoped that the birds will like Tasmanian and stay here.
1958	11 April	22	During a visit to Queenstown, we noticed that the new lagoons and lakes created
_			by the HEC mostly contained some waders and ducks. Thus, habitats for these birds and for fish have been increased and the tourist assets of Tas. built up as a by-product of the HEC
1958	15 Aug	26	Brief description and drawing of Anaspides tasmaniae
		•	· · · · · · · · · · · · · · · · · · ·

28	The club is actively concerned with the conservation of native flora and fauna
	therefore'the club does not encourage the picking of wildflowers, especially in
	quantity, it does not set a good example if members are seen carrying quantities of wild flowers homebut it is quite a different matter if members wish to collect
	specimens to press for a herbarium or for other purposes of natural history,
	though even then a reasonable minimum should be taken and again provided the
	area carries plenty of the particular plant'
34	Export of Australian Birds: The Commonwealth Govt is calling a conference to
	consider this trade. In the 1953/54 financial year 27,738 native birds were
	exported, two years earlier this number was 48,000
34	Growing interest in the need for a national flower; need for more scientists on the
	fauna board; concern about proposed sealing on Macquarie Island
35	The uncommon Crested Grebe was sighted from the Sorrell Causeway.
45	Len Wall reported seeing a Dominican Gull at the abattoir at Sorrell. The bird looks
	like a Pacific Gull but has no black band on the tail (noticed in flight) and it has a
	smaller bill- lighter yellow, rather than orange. This report is about the 4 th to be
	recorded in Tasmania.
45	Handy Hints for the Collector:
	Cleaning and Polishing Shells
	When Classifying your Collection
	Useful Equipment
	For details see Circular.
46	It is reported from Chauncy Vale that a masked owl was caught recently. This bird
40	is not rare but being nocturnal it is rarely seen. The bird has since been released.
48	The Orchid Show:there was a small but most effective display of native orchids
	arranged by the TFNC. The Committeewould like members and all interested to know that the TFNC decided against picking specimens this year – thus depleting
	the bush of its natural beauty – and only used what could be obtained from
	members who grow specimens at home.
50	The Hon Secretary (David Wilson) "has had a pair of kookaburras under
30	observation on Mt Nelson for the past four weeks. So, it appears the birds have
	perhaps taken up residence permanently in the Hobart area"
51	Kelsey Aves reports "the European wasp (Vespa vulgaris) we slew our first wasp
	at breakfast on February 26 th 1961alas it is a fruit pest and an all too ready
	stinger. A regrettable immigrant!"
52	Bush Fires – Although the bush fire problem has seemed almost insoluble, one
	very practical step was taken by the Tasmanian Timber Association in calling to a
	conference, representatives of almost every organisation intimately or remotely
	interested in the control of bush fires. We believe that the horizons of all who
	attended were broadened by interchange or views and the problems brought into
	better perspective. These, with resolutions passed at the meeting will form a basis
	for more realistic and co-ordinated action in future.
53	Beetles: Dr Thyne reports "This summer has a very happy one for Christmas
	Beetles (Choerocoris paganus). Why? Because Native Hop (Dodonea viscosa had a
	wonderful flowering season. Last summer it did not flower at all, and so no lovely
	beetles. For weeks all stages of development were seen from minute to full size beetles" "Many drying moulted cases could be seen attached to grass stems.
	Now they are hibernating. This exquisite little bug is not a pest as it lives on box,
	grasses and plantains.
54	Migration of Mountaineers: Black jays usually inhabit the 2000' and above zone,
- .	o. atto. o. mountaineers. Black jays assuing initiable the 2000 and above 2011e,
	but in and around our garden in Sandy Bay, only 200' above sea level, a flock of
	but in and around our garden in Sandy Bay, only 200' above sea level, a flock of jays about 20 strong has settled down for the last 2 or 3 weeks. They have lived on
	but in and around our garden in Sandy Bay, only 200' above sea level, a flock of jays about 20 strong has settled down for the last 2 or 3 weeks. They have lived on apples and almondscontinued:

56	Mr MRS Sharland writes from Alice Springs: "I had a wonderful trip some
	200miles SW from here. Main object was to see the 'extinct' night parrot, claimed
	to be rediscovered in that area. But I also visited Kings Canyon a really wonderful
	feature just opened as the newest tourist find in the Centre. No parrots, however but quite a fewof the very rare Bourke parrot"
50	Fire danger period declared. TFNC efforts to awaken the public to the tragedy of
39	bush fires. Members are behoved to set the best possible example
64	Dr EA Elliott – the last foundation member of the club and life member writes:
04	Nearly 70 years ago a man named Hutch from NZ leased Macquarie Island, and
	taking a gang of men shot the remaining seals and sea elephants. Then they built
	large ramps and drove the penguins by the acre up the ramps and into the boiling
	vats to get their oil. Alexander Morton was Curator of the Museum then and was
	instrumental in getting the lease cancelled.
	Shooting was the proper thing to do to any bird or animal in my boyhood"
65	Mrs H Boss-Walker reports of the albino form of the grey Goshawk visited their
	garden St Chad
66	Mrs Kathleen Orme(at 76 York Street, Sandy Bay) reported "I am thrilled to have
	visits to my bird tables for the past four or five weeks (since my red gum
	blossomed) of a pair of Rainbow Lorikeets and what I think is one of their young"
	Michael Sharland noted that "The Rainbow Lorikeet is a very uncommon visitor to
	Tasmania and is one of the most handsome of parrots. It travels in small flocks,
	wandering through the bush and occasionally coming into gardens in search of
	flowering trees, the nectar from which forms part of its diet."
	Copies of letters written in Nov & Dec 1907 by a Geoffrey Watkins Smith who was
68	later killed in WWI gives an account camping with Leonard Rodway and his
	impressions of the Tasmanian bush.
76	Discovery of lyre bird nest at Hastings and discussion about the removal of the nest and egg back to Hobart
۱	That is an in the last of the first of the second of

This is a little-known native pine in Tasmania, of small size and consequently of no commercial value and has been recorded from very few localities. Some used to consider it to be a hybrid of King Billy and Huon Pines, but this has proven incorrect. In the course of a recent scramble between Lady Barron Falls and Lake Fenton, I found a small colony of this tree by Lady Barron Creek, about a mile below its source in Lake Fenton. (2018 Note: It is now called Arthrotaxis X laxifolia and is known to be a hybrid between A. selaginoides (King Billy Pine) and A. cupressoides (Pencil Pine) Michael Sharland: "Please try to determine whether the Striated Pardalote (Tree Diamond Bid) stays in Tasmania during the winter months. At the last meeting Mr Sharland asked for help in this 'project' which he is undertaking. He believes this
85	developed with accommodation and other facilities for visitors if so to what extent? TFNCs Conservation Committee (Mrs Jessie Luckman, David Wilson, Gilbert van Munster, Peter Bolger & Len Wall) asked the question of members. At that time the National Parks were administers through the Scenery Preservation Board under the authority of the Scenery Preservation Act, but the Act makes no mention of the term National Park. In August 1964 TFNC was asked by the Tas Flora and Fauna Conservation Committee for a concise account of what as a club consider to be the answer. An interesting note from Mr L Wall: Arthrotaxis laxifolia. 			on migration. So far, the only re-traps have come from the wintering areas – in other works birds which feed in certain paddocks appear to return to those very same areas in succeeding years. We know that many birds breed in the mountains, but which birds go we do not know. If any Tasmanian banderscan give any help we would be very grateful. Details regarding dates of arrival and departure, nesting areas and of course an endeavour to banks and re-trap as many birds as possible, would be welcome."
1964	Aug	86	Australian Institute of Aboriginal Studies asks: "Have you any information on Aboriginal Customs, art, history etc in your area? If so please contact the above society 29 Lonsdale St, Braddon ACT or Box 553 City GPO Canberra. They are anxious to record basic knowledge before it is lost."
1964	Oct	88	Native Orchids: Mr M.J. Firth President of the Devonport FNC is engaged in research work in native orchids in Tasmania. He would like to contact botanists willing to correspond with him on orchids generally, and in particular, on localities on the South of the state where various species are to be found. Mr Firth has been studying orchids for 30- years and has collected and identified over 90 of our species, so would be very willing to assist anyone uncertain od their classifications. Correspondents would need to be familiar with recent publications, (such as JH Willis's excellent book or the volumes of Nicholls)"
1965	April	93	Veronica species: Dr OH Frankel C.S.I.R.O. is anxious to obtain material of the Tasmanian species for cytotaxonomic study. Any members who want to assist by collecting plants and seed capsules should be sent to Dr Martin, CSIRO Tasmanian regional lab, Stowell St
1965	17 April	Club Outings Book (deposit ed with AOT NSI 1428/1/ 14.)	Len Wall reports Spine-tailed swifts in April at the Douglas River Easter camp
1965	May	94	TFNCs representative on the South West Committee: Michael Sharland: First mention of possible flooding on Lake Pedder which this committee opposes, but it does support the road into the lake for tourist purposes. Also, committee formulating a master plan for the preservation of the Port Davey area and the proclamation of a national park there.
1965	June	95	The Tasmanian Fur seals - Elizabeth Aves reports that there are colonies on the rocks of Cape Pillar and the large Hippolyte Rock – of about 10 seals each
1965	June	95	Snails "Did you know that most of the snails in our gardens are imported? Our snails came from England, most of the by accident either as eggs or babies in consignment of post plants or garden plants, but at least one consignment came in with almost an official welcome; they were put aboard the ship that brought the first lot of song thrushes from England or the Royal Society and Acclimatization Society of Victoria, away back in the early days. The thrushes did not eat all the snails on the voyage out and these were liberated in gardens in South Yarra. A little laterthe Society reported with some satisfaction that the snails were thriving, and presently there would be no fear that the thrushes they had liberated would go short of food" ('Along the Track' with Crosbie Morrison)
1965	July	96	Have you noticed that the Blackwood (<i>Acacia melanoxylon</i>) is once more appearing in appreciable numbers in our bush? Tasmania was almost denuded of this beautiful tree many years ago, its wood being in great demand for furniture for its rich dark colour. Many of the large passenger liners calling into Hobart from England has built in cabin furniture and cabin linings of Tasmanian Blackwood.
1965	July	96	Does anyone know why the Koala was not used on the new decimal currency brought into use on "C" (Changeover Day) – 14 February 1966? Could it be because it might have reminded a certain state government that by licensing

			10 000 transers – ves 10 000 – in an open season it wined out a known 500 000
			10,000 trappers – yes 10,000 – in an open season it wiped out a known 600,000 koalas in one year - a decimation from which the creature has not yet recovered –
			and the year of the slaughter – 1927.

			The motor car has certainly changed the lives of this generation. Shoppers won't
			come to shops without car parks, so car parks have come to the shops in the new
			shopping centres. So also, with cinemas. Banks and what-else-next?
			And now we have become used to getting within a few feet of normally shy hirds
			And now we have become used to getting within a few feet of normally shy birds
			by keeping in the car, even our movements inside it don't usually disturb them,
			though of course they are off the moment we get out. This has made us wish we
			could take out car out on the end of swamps where cars can't go, so if you see a
			theatrical stage cut-out of a car moving along some unlikely spot propelled by four
			feet at the bottom of it, it will be our new potential "hide", telescopic camera and all.

1972	Nov	170	Federation Meeting report
13/2	NOV	170	1. Should the club give support for the search for the Thylacine?
			2.Should some plant species be protected e.g. Leatherwood and Huon Pine is
			already being taken for commercial purposes/wood chip etc.
			3. Should Clubs make lists of flora rare in their areas.
			Currently one can go and dig them up, but if they become protected should they
			be propagated/be available for sale.
			4. Types of habitat – Ecotypes Clubs could report on the types already protected in
			their area. – The Club forward a report on this to Federation in Feb 1973
			5. Need for a booklet of interest for tourists which lists where birds/animals/flora
			can be found as they tour the island.
			Feedback requested to the Secretary asap.
1973	15 Jan	Obs	Pilot Whales sighted at Booming Bay Maria Island by FE Warren
		book	
1973	15 March	Obs	Numerous sightings of what was thought to be Fork-tailed Swifts around Hobart
		Book	and at Primrose Sands – The President thought they would be seen for another
			month especially on humid days
1973	15 March	Obs	Sulphur Crested Cockatoos reported at
		Book	South Cape Rivulet in Feb
			Epping Forest in early Feb
			 There was one near Port Arthur some years ago – could be a colony
			which moved around
			 Alan Hewer reported that some were released on Maria Island and it is
			thought some were still there.
1973	April	173	Pollution Effect on Bird Migration: Report from Tokyo that many species of birds
			have stopped their seasonal migration to Japan because of pollution and the
			destruction of their natural habitat. 76% of their birds are migratory, but in 1971
			one tenth of the numbers of wild geese migrated compared to those in 1953.
1973	April	173	Society for Growing Australian Plants – has started collecting plant material for its
			own herbarium, so they can record flowering times/ when seeds are ripe etc. They
			request info on the sightings of plants and if possible their flowering time. Send to
			their President: Mrs MF Allan.

1990 Oct 260 Useful Guidelines for Collecting with Care: Land Snails. Kevin Bonham writes had to collect and store snails whether dead or alive.
TFNC Wildlife/Mammal Survey Group has been established. Don Hird and Andr Weinart have been granted permits to trap and release mammals for the purpure of contributing to knowledge of faunal distributions in particular as well as to mammal biology generally. In addition, general and spotlight observation, track signs identification and hair sampling. We aim to operate informally on the weekend of the fortnight after the monthly excursions. Initially we will work in Mt Wellington range and of selected areas such as Chauncy Vale and possibly "Glenelg". 1991
Weinart have been granted permits to trap and release mammals for the purpo of contributing to knowledge of faunal distributions in particular as well as to mammal biology generally. In addition, general and spotlight observation, track signs identification and hair sampling. We aim to operate informally on the weekend of the fortnight after the monthly excursions. Initially we will work in Mt Wellington range and of selected areas such as Chauncy Vale and possibly "Glenelg". 1991 April 262 Threat to the Gouldian Finch found in north of Australia one of the few breedin populations are threatened by proposed gold mining operations near Katherina NT. More detail given. Members were encouraged to send letters expressing concern to Shell; Minister of Environment and NT Chief Minister. 1991 April 262 Frogwatch questionnaire – if members have/have had frogs in your area, they were encouraged to complete Michael Tyler, University of Adelaide 's survey were encouraged to complete Michael Tyler, University of Adelaide 's survey were encouraged to complete Michael Tyler, University of Adelaide 's survey area encouraged to comment has been released. Members encouraged to make comment 1991 April 262 Management of the Wellington range. The Wellington Range working group has been established to recommend to government how best to manage it. Many issues involved natural and cultural; recreational activities and facilities; wistor facilities; water quality management; resource use; commercial developments future status of the area. Should it be a National Park or a Reserve? But not a multiple Use reserve. Members are encouraged to comment. Erica, cotoneaster and introduced black rats are evident but not yet pervasive. The income from the Mt Nelson project has enabled the mammal group to acq
Erica, cotoneaster and introduced black rats are evident but not yet pervasive. The income from the Mt Nelson project has enabled the mammal group to acq their own set of small mammal traps. More detail given.

1994	Oct	276	On Cape Raoul a new population of the very rare eyebright <i>Euphrasia</i> amphisysepala was found by Phil and Sue Collier
1994	Oct	276	Phil and Sue Collier sighted at White beach a single rainbow lorikeet feeding on
4004		076	black gum (<i>Eucalyptus ovata</i>), perhaps it was an aviary escapee?
1994	Oct	276	Phil and Sue Collier sighted four spider orchids in one day. Three at Lime Bay
			Caladenia clavigera; C. aff. Patersonia; C filamentosa and the fourth C. venusta
4004	0.1	276	was sighted near the airport
1994	Oct	276	Report of a sandstone valley walk to Mt Marion, Mt Wellington.
1995	Jan	277	Report on the Gilberts Potoroo thought to be extinct for 125 years has been found on Western Australia's southern coast
1995	Jan	277	Report on Wollemi Pines – 39 trees have been found west of Sydney in a deep
1995	Jan	2//	gorge of the Blue Mountains. Thought until now to have been extinct for
			150million years. More detail given.
1995	Jan	277	Hooded Plover Observation Record Sheet
1995	Jan	277	Junior page: 'How the Pademelons got their fur'
			Conservation Lobbying Activities - covering draining of Lake Pedder TFNC
1995	April	278	submission doubted the current priority of the drainage proposal. More detail
			given.
			Also the woodchip license issue – TFNCs view was some independent arbitration
			(e.g. federally mediated) is needed. More detail given.
1995	April	278	Survey Group Report: Eastern barred bandicoot habitats
1333	Дріп	270	New Wildlife/mammal Survey Group flyer (Blue) was produced
1995	Oct	280	Conservation in Tasmania: Costume Drama or Concerted Effort by Don Hird
1995	Oct	280	Junior observation: Sacred Ibis sighted near Electrona
1995	Oct	280	Junior observation: Bright Yellow Nemertean worms
1995	Oct	280	Junior observation: Phalaenoides tristifica – a day flying moth observation by a
1333	Oct	200	junior member in Cygnet.
1996	April	282	Conservation Issues:
	7		Establishment of Mt Wellington Trust pros and cons.
			Public Land Use Commission has made recommendations including six
			new NPs, but only two have been approved. Discussion on the processes
			and the fact we do not know our biotas well enough for informed
			decisions.
1996	July	283	Creative Answers to Conservation Dilemmas: by Don Hird. Much more detail
	7		given.
1996	Oct	284	Conservation Angle written by Don Hird:
			Discussion on the Regional Forest Agreement and the independence or
			not of its administration etc.
			 It asks why are there so may conservation groups?
			Debates the Forest Protection Society
1996	Oct	284	Timelines Australia Project – compilation of seasonal calendars for local natural
1997	June	286	eventscoordinated by Alan Reid and the Gould League of Victoria. Such
			calendars are important in the oral tradition of Aboriginal Australians in parts of
			northern Australia, but they are generally lost to our natural heritage elsewhere.
			Tasmania seems especially conducive to this sort of documentation with its insular
Ì			nature and relatively high latitudes and many migrant species. Alan Reid will be
			conducting a workshop on Timelines in Hobart in January (1997). More detail
			given.
			The four European seasons is inappropriate for northern Australia and only
			roughly matches that of southern Australia. Are six seasons or the five to seven
			seasons of Aboriginal calendars more appropriate?
			Contribute to this project recording by your local and plant behaviour along with
			the date and location and sent to Tasmanian Environment centre.
1997	6 March	286	Tamar Island Wetlands facilities and bird observations

1997	June	286	Centipedes and Millipedes ae beautiful but much too little appreciated. Bob
			Mesibov from QVM Launceston wants specimens for identifying and databasing.
			Recording methods, preserving and shipping information is provided. More detail
			given.
1997	June	286	Animals and Plants Threatened by Declining water quality. Peter McGlone
			Coordinator of Threatened Species Network has made a submission with the
			Tasmanian Conservation Trust and presented it to the Sustainable Development
			Advisory Council commenting on the draft of the State policy in Water Quality
			Management in February. Goes on to detail a few of their concerns.
1997	Aug	287	Article on the Birds Nest Fungus by David Ratkowsky
1997	Nov	288	Report on the Peter Murrell Reserve formation and the Interim management
			Strategy. An important area that contains important forest and button-grass and
			heathland communities.
1997	Nov	288	Butterfly Common Name Changes (by Brady MF et al 1997). Details the suggested
			changed names and asks for feedback. Table compares the names as listed in the
			'Butterflies of Tasmania' and the new recommended common name
1997	Nov	288	Wanted: Dung or Alive! The Australian Fungi mapping Scheme have put out a call
			for dungThey require small collections of native herbivore dung (no carnivores'
			dung please). Gives details of how to dry, store, label and record locations
1998	Aug	291	Fox seen entering Burnie Harbour. Website link provided
1998	Aug	291	New frog fungus belonging to a new genus of chytrid fungus has been
			describedalso is UV implicated? Ref New Scientist 27 June 1998
1998	Oct	292	Seabird Project will run Oct 1998 to March 1999. Will involve surveying
			populations of shore birds and migratory wadersregular observers needed. More
			detail given.
